

**Download
KiCad**

KiCad Installation

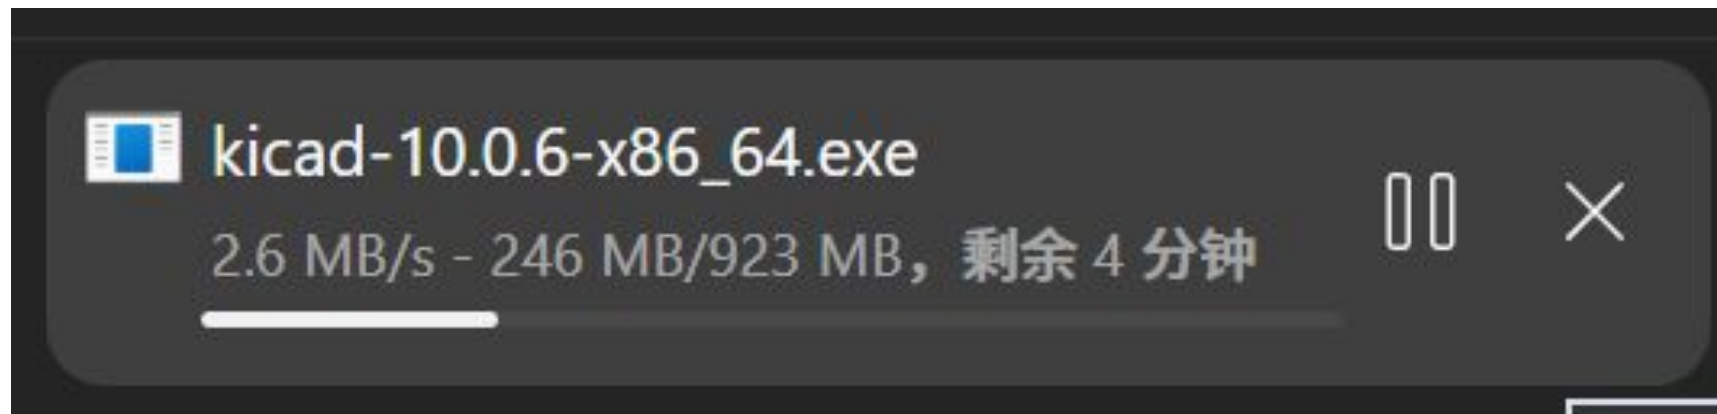

- Download KiCad 10.0.6 through the link we provided:
 - [Windows](#)
 - [MacOS](#)
 - Linux
 - Install from terminal via flatpack: Flatpack install-from <https://flathub.org/repo/appstream/org.kicad.KiCad.flatpakref>
- Please be noted that the demonstration of rest the slides will be conducted under Windows

KiCad Installation

Install

Interactive
This plugin generates a BOM listing with the ability to search for components. It is particularly useful for large projects as it allows users to filter components by groups on the board, making the component grouping drawing easier.

The plugin utilizes the silk screen render drawings. BOM is configurable, a component ID, can be added through the net internal BOM to

Note:

Please do NOT put all the project files into a single folder

 2026-rdc-controller-2026-08-20	2026/8/25 上午 09:25	File folder
 2026-RDC-Controller-2026-08-25	2026/8/25 下午 07:19	File folder
 2026-RDC-Controller-2026-08-26	2026/8/28 下午 09:16	File folder
 2026-RDC-Controller-2026-08-27	2026/8/28 下午 08:51	File folder
 2026-RDC-Controller-2026-08-28	2026/8/31 下午 02:41	File folder
 2026-RDC-Controller-2026-08-31	2026/9/20 下午 05:50	File folder

Good Habit: One project one folder + Version Tracking

Library Import

Library Download and Import:

- We Provide you the library you need:

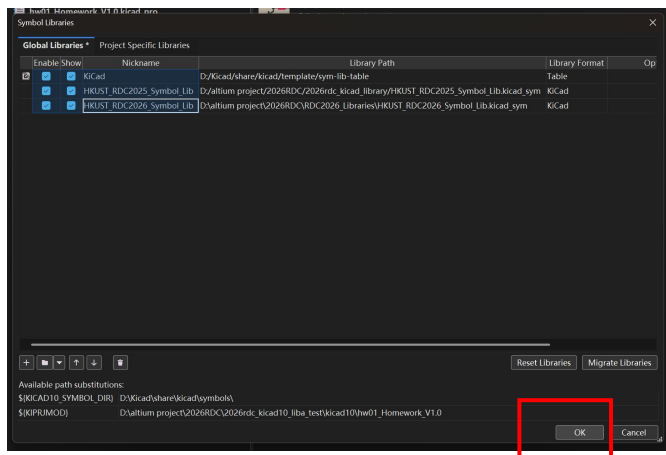

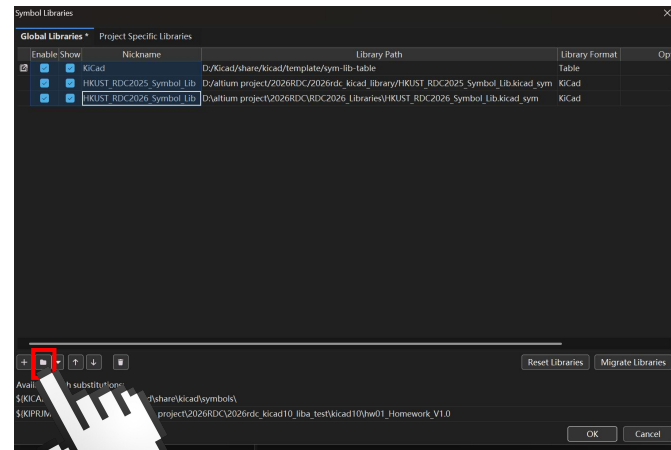

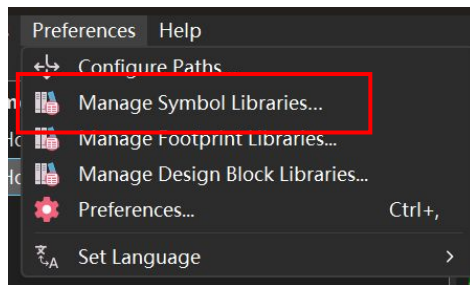

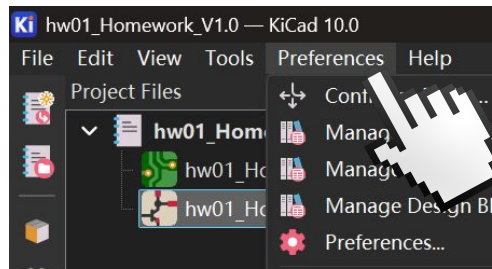

Please make sure you have downloaded the RDC2026_Libraries before importing.

 RDC2026_Libraries

 HKUST_RDC2026_DRC_template	文件夹
 HKUST_RDC2026_Footprint_Lib.pretty	文件夹
 1.8_inches_128x160_RGB_TFT_LCD.DXF	DXF 文件
 HKUST_RDC2026_Symbol_Lib.bak	BAK 文件
 HKUST_RDC2026_Symbol_Lib.kicad_s...	KICAD_SYM 文件

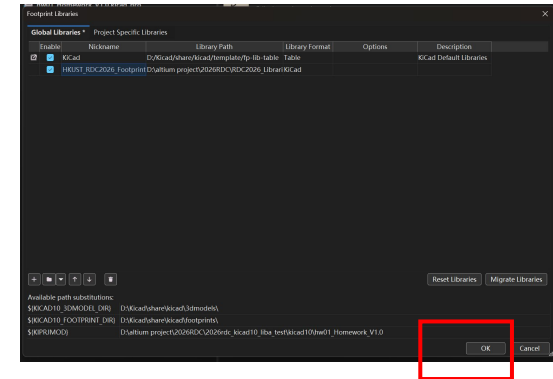

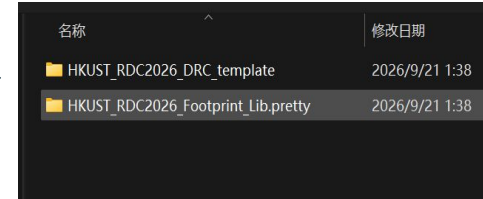

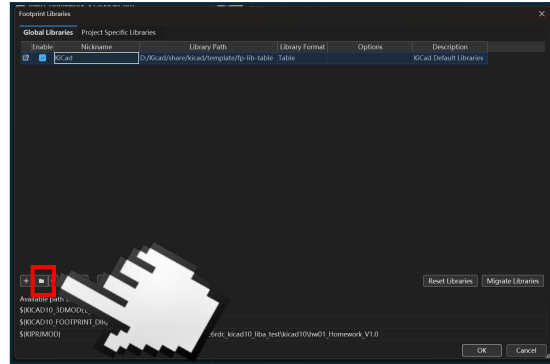

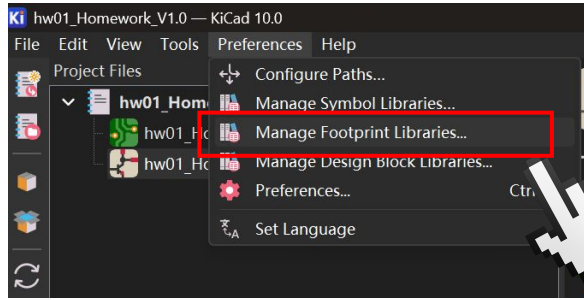

To add symbol library:

A screenshot of a file explorer window showing the contents of a directory. It lists three items: a folder named 'HKUST_RDC2026_DRC_template', a folder named 'HKUST_RDC2026_Footprint_Lib.pretty', and a file named 'HKUST_RDC2026_Symbol_Lib.kicad_sym'.

名称	修改日期	类型
HKUST_RDC2026_DRC_template	2026/9/21 1:38	文件夹
HKUST_RDC2026_Footprint_Lib.pretty	2026/9/21 1:38	文件夹
HKUST_RDC2026_Symbol_Lib.kicad_sym	2026/9/21 1:38	KICAD_SYM 文件

To add footprint library:

Naming rule

- Rule: [nameofboard]_[version]_[layer]_[thickness]
eg. test_V1.0_L2_T1d6
- Version:
 - If schematic change: test_V2.0_L2_T1d6
 - If minor changes in PCB layout: test_V1.1_L2_T1d6
- Thickness:
 - usually T1d6 (1.6mm) for L2/L4 boards
 - Can be higher for special orders (higher current, thicker copper etc.)

See [here](#) for *jlcpcb custom made boards options*, you can change colours of your boards :D
After all things are done, you should have these things in the project file:
